WEB DEVELOPMENT

Web developer is a role that makes it possible to create a site. A job that many people are looking for today. Profession Web developer means a person who develops a web tasked with creating, designing, and maintaining applications and websites. This work is generally required by many specialized companies, but not a few also work freelance or are not tied to the company, but to clients. Web developers are responsible for building and providing the best experience for visitors to a site. They manage the layout of the page, the style of the content on the site, as well as interactive.

The main goal of a web developer profession is to create efficient web services which is the obligation of web developers to ensure that the needs of clients are met. Here are some types of web developers:

- Front-end Developer

  People assigned to the Frontend Developer field usually have job descriptions and tasks for building web interfaces and designing. There are several programming languages that must be mastered if you want to become a Frontend Developer. These programming languages include CSS, Javascript and HTML.

- Backend Developer

  The second role is as a Backend Developer, where the task of someone who works in this section is to manage the content from within the website. For example applications, databases and servers.

work commonly done by web developers.

1. Creating a site

   In general, the main task of a web developer is to build a site through one or more programming languages. Specifically, their tasks are tailored to each role, such as frontend, backend, or database.

2. Create a site creation plan

   The site creation plan is built to find out what instructions are in it. It is also used to weigh each page in an instruction so that there are no problems later.

   Being a web developer is not an easy job to do. However, this job is so needed in the digital era like now that many people are competing to master the skills needed to be accepted as a web developer.
